Docket No. TUC920030018US1  
Firm No. 0018.0127

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (Original) A method for creating a copy services solution, comprising:  
receiving a document describing the copy services solution;  
converting the document to executable code; and  
executing the code to perform one or more base copy services solutions described with base copy types in the document.
2. (Original) The method of claim 1, wherein the document comprises an Extensible Markup Language document.
3. (Original) The method of claim 1, wherein the document describes a session comprising one or more sequences and wherein each sequence represents a base copy type.
4. (Original) The method of claim 3, wherein at least one sequence includes characteristics for the base copy type represented by that sequence.
5. (Original) The method of claim 3, wherein at least one sequence includes an event and an action to be performed for that event.
6. (Original) The method of claim 2, wherein converting the document to executable code further comprises:  
deserializing the Extensible Markup Language document to form one or more classes, wherein each class includes data describing zero or more characteristics of a base copy type and including zero or more methods representing actions to be performed for particular events.
7. (Original) The method of claim 1, wherein converting the document to executable code further comprises:

Reply to Office action of January 11, 2006

Serial No. 10/621,806  
Docket No. TUC920030018US1  
Firm No. 0018.0127

identifying a base copy services solution to implement for a base copy type described in the document.

8. (Original) An article of manufacture for creating a copy services solution, wherein the article of manufacture causes operations, the operations comprising:

receiving a document describing the copy services solution;

converting the document to executable code; and

executing the code to perform one or more base copy services solutions described with base copy types in the document.

9. (Original) The article of manufacture of claim 8, wherein the document comprises an Extensible Markup Language document.

10. (Original) The article of manufacture of claim 8, wherein the document describes a session comprising one or more sequences and wherein each sequence represents a base copy type.

11. (Original) The article of manufacture of claim 10, wherein at least one sequence includes characteristics for the base copy type represented by that sequence.

12. (Original) The article of manufacture of claim 10, wherein at least one sequence includes an event and an action to be performed for that event.

13. (Original) The article of manufacture of claim 9, wherein operations for converting the document to executable code further comprise:

deserializing the Extensible Markup Language document to form one or more classes, wherein each class includes data describing zero or more characteristics of a base copy type and including zero or more methods representing actions to be performed for particular events.

14. (Original) The article of manufacture of claim 8, wherein operations for converting the document to executable code further comprises:

Amdt. dated April 11, 2006  
Reply to Office action of January 11, 2006

Serial No. 10/621,806  
Docket No. TUC920030018US1  
Firm No. 0018.0127

identifying a base copy services solution to implement for a base copy type described in the document.

15. (Original) A system for creating a copy services solution, comprising:  
means for receiving a document describing the copy services solution;  
means for converting the document to executable code; and  
means for executing the code to perform one or more base copy services solutions described with base copy types in the document.

16. (Original) The system of claim 15, wherein the document comprises an Extensible Markup Language document.

17. (Original) The system of claim 15, wherein the document describes a session comprising one or more sequences and wherein each sequence represents a base copy type.

18. (Original) The system of claim 17, wherein at least one sequence includes characteristics for the base copy type represented by that sequence.

19. (Original) The system of claim 17, wherein at least one sequence includes an event and an action to be performed for that event.

20. (Original) The system of claim 15, wherein converting the document to executable code further comprises:  
means for identifying a base copy services solution to implement for a base copy type described in the document.
